OXYSURE[®] SYSTEMS MODEL 615

SAFE, PORTABLE EMERGENCY OXYGEN SYSTEM

As a practicing physician, I am excited about the development of the OxySure[®] oxygen system which will revolutionize the emergency delivery of oxygen and save numerous lives.

OxySure will give me the ability to ensure that my patients suffering from cardiac and respiratory problems will have an emergency supply of pure oxygen available to them at all times.

Schools, churches, industry, airlines, and sports organizations are now able to have an emergency supply of life saving oxygen immediately available in a form that is both easy to use and to transport. Combined with the continued increase in availability of cardiac defibrillators, the OxySure system will prove invaluable in saving lives of individuals stricken with sudden collapse due to cardiac or respiratory problems.

The availability of pure oxygen to trauma victims can be life saving and OxySure can be easily carried by police and administered even before the arrival of EMS responders.

The OxySure system has been designed to allow almost anyone, including children, to be quickly trained in its use.

The availability of OxySure without a prescription gives patient and organizations the ease of obtaining and maintaining adequate supplies of this valuable product.

Sincerely,

A handwritten signature in cursive script that reads "James R. Winn, M.D.".
