### **OxySure® announces relocation to new 16,500 sq foot, state of the art facility**

**FRISCO, Texas – 11.26.07** --- OxySure® Systems, Inc. today announced that the company has completed its move into a new 16,500 square foot facility in Frisco, Texas. The new facility combines the company's corporate offices with its manufacturing and research functions. OxySure® is now well positioned to meet the expected ramp up in production of the company's commercially available Portable Emergency Oxygen Generator, Model 615, as well as product line extensions and other products under development.

The new facility forms part of a well planned strategy that will give OxySure® flexibility and more control over production schedules, production costs and a greater ability to protect intellectual property as it relates to manufacturing process and process design.

"Consolidating our three previous locations into one building and having all the support staff under one roof will greatly improve our productive capacity. The warehouse space and custom designed manufacturing equipment will provide a safe, efficient and effective work environment for our growing workforce in the years to come" said Scott Freeman, Vice President of Operations at OxySure®.

As previously announced, the build out of this new facility is partially facilitated by an economic incentive package from the Frisco Economic Development Corporation ("FEDC") and Sinacola Commercial Properties Ltd. OxySure's new headquarters is easily accessible and is conveniently located along the North Dallas Tollway and in the path of the explosive northward growth of Frisco.

Julian Ross, Chairman and CEO of OxySure®, stated: "We spent several months building out this facility to our specifications, and we are thrilled to have taken occupation. We also have rights to an additional 50,000 square feet of adjacent space, giving us ample support for growth well into the next 5 years."

### **About OxySure®**

OxySure® Systems, Inc. is a Frisco, Texas-based medical technology company focused on the design, manufacture and distribution of specialty medical and respiratory products. The company has developed a third generation catalytic process and methodology to generate medically pure (USP) oxygen from proprietary inert powders. The company owns numerous patents pending on this technology which makes the provision of medical oxygen safer, lighter and less expensive than traditional oxygen provision systems. OxySure's easy to use products improve access to emergency oxygen that affects the survival, recovery and safety of individuals in several multi-billion dollar markets involving both established and expansion customer markets: (1) Individuals at risk for cardiac, respiratory or general medical distress needing immediate help prior to emergency medical care arrival; and (2) those requiring immediate protection and escape from exposure situations or oxygen-deficient situations in industrial, mining, military, or other public settings.
