OxySure and Frisco ISD implement first ever Cartridge Recycling Program

Frisco, Texas, November 7, 2011 – OxySure® Systems, Inc., a pioneering manufacturer of life-saving, easy-to-use emergency oxygen devices for lay person use launches a first of its kind cartridge recycling program with one of its most valued customers, Frisco Independent School District (FISD). OxySure and FISD have already begun the implementation of the program, which includes the establishment of a central collection depository for used cartridges where district nurses, coaches and staff can send the units for recycling. The depository will be housed at the maintenance division. OxySure, in coordination with the FISD maintenance, risk management and compliance departments will ensure periodic collection, safe handling and recycling of the OxySure cartridges.

“We are pleased to provide this enhancement to the OxySure program,” said Tim Sanz, Manager of FISD’s Environmental Health & Safety / Risk Management Programs. “In a very short time, we have processed dozens of cartridges through this new recycling program, and it demonstrates our commitment to the environment in a tangible way.”

The OxySure Model 615 is a revolutionary portable emergency oxygen delivery system, which has recently featured prominently in the national media, including the Today Show with Matt Lauer, in connection with the recent save of 12-year-old girl who had collapsed from sudden cardiac arrest in an FISD school. OxySure was used post-resuscitation, in accordance with universally accepted protocols and guidelines for CPR and cardiac emergencies.

Model 615 has a reusable housing, and a disposable cartridge that is easily and quickly replaced. The contents of the cartridges *do not* present traditional hazards associated with oxygen provision systems, such as for example fire hazards, explosion hazards or environmental hazards.

About OxySure Systems, Inc.

OxySure Systems, Inc. is a Frisco, Texas-based medical technology company that focuses on the design, manufacture and distribution of specialty medical and respiratory solutions. The company pioneered a safe and easy to use solution to produce medically pure (USP) oxygen from inert powders. The company owns numerous issued patents and patents pending on this technology which makes the provision of emergency oxygen safer, more accessible and easier to use than traditional oxygen provision systems. OxySure’s products improve access to emergency oxygen that affects the survival, recovery and safety of individuals in several areas of need: (1) Public and private places and settings where medical emergencies can occur; (2) Individuals at risk for cardiac, respiratory or general medical distress needing immediate help prior to emergency medical care arrival; and (3) Those requiring immediate protection and escape from exposure situations or oxygen-deficient situations in industrial, mining, military, or other public settings. www.OxySure.com
